

SPRAYLAT INTERNATIONAL

Registered Name: Spraylat International Ltd
Incorporated On: 6 April 1992
Head Office: United Kingdom
Operating Regions: UK & International

SPRAYLAT INTERNATIONAL LTD

CAPABILITY STATEMENT

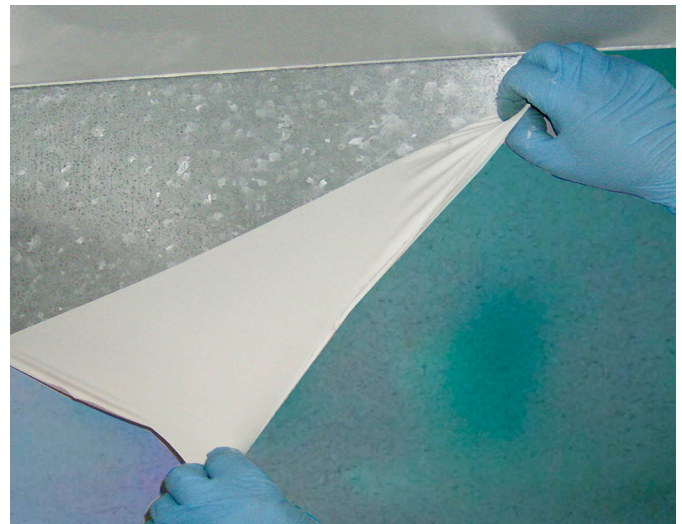

ABOUT US

Spraylat International is a UK-based manufacturer of specialist temporary protective coatings designed to protect spraybooth walls, floors, lighting and equipment from paint overspray, contamination and build-up. Engineered for demanding finishing environments, Protectapeel creates a clean, protective barrier that improves booth efficiency, reduces cleaning time, and helps maintain consistent finishing quality. With over 30 years of experience supporting industrial and manufacturing environments, Spraylat International is trusted by organisations seeking to extend the life of spraybooth infrastructure while reducing maintenance downtime.

PRODUCT CAPABILITIES & PERFORMANCE

- Liquid applied by airless spray gun for consistent coverage
- Easy to remove by peeling, leaving the surface residue-free
- Withstands temperatures of up to 80°C
- Can be overcoated several times before having to peel back
- Up to 12 months of protection with no loss of adhesion, ensuring consistent performance
- Labour-efficient application and removal, minimising downtime and manpower requirements
- Reduces time-consuming maintenance cleaning
- Eliminates the need for solvent-based cleaning products
- Fully recyclable within the UK
- ISO 9001 accredited
- Low VOC products

Reduce Cleaning Time By 50%

Every minute your spray booth is shut down for cleaning is a minute you're not painting, and not earning.

In busy paint shops, overspray quickly builds up on walls, floors, lights, and fixtures, turning simple wipe-downs into hours of scraping and heavy solvent use. That means skilled painters stuck cleaning instead of spraying, production delays during deep cleans, and rising chemical costs as stubborn overspray accumulates.

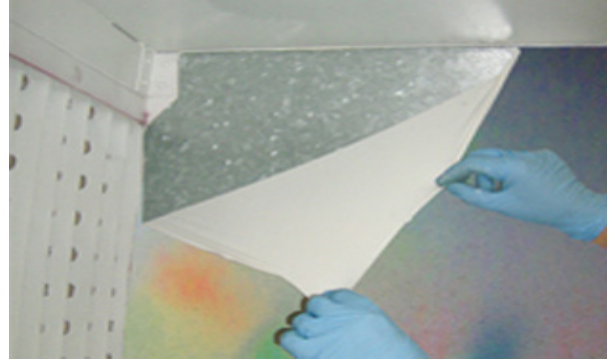

Protectapeel solves the problem by creating a peelable barrier across booth surfaces that captures overspray before it sticks. It can be oversprayed multiple times and, when fully coated, simply hand-peels away, taking all the overspray with it and revealing the original clean surface underneath.

This eliminates the need for harsh solvents and chemicals during cleaning, making booth maintenance faster, safer, and far less labour intensive. Just reapply with an airless spray gun and your booth is protected again. The result? Cleaning time reduced by up to 50%, brighter and more reflective surfaces, better spray visibility, and more time doing what matters: spraying, not scraping.

Peel Your Way to Faster, Cleaner Spray Booths

Once the coating becomes heavily layered with overspray, Protectapeel can simply be peeled away by hand, removing the accumulated paint and revealing the clean surface underneath.

It simply condenses into a small ball and can be returned to our manufacturing facility for free recycling within the UK.
