Spraybooth Temporary Surface Protection

Protectapeel Boothstrip is a specially formulated, peelable coating designed to protect spraybooth walls, ceilings, lights, and other surfaces from paint overspray, dust, and contamination. Easy to apply by airless spray gun and simple to remove by hand peeling when required. Protectapeel Boothstrip helps maintain a clean, efficient working environment while reducing cleaning time and extending the life of spraybooth surfaces.

- Spray Application For Even Coverage
- Easy To Remove By Hand Peeling
- Withstands Temperatures of up to 80°C
- Can Be Overcoated Several Times
- 24 Months Protection
- Reduces Time-Consuming Cleaning Maintenance
- Eliminates The Need For Solvent-Based Cleaning
- Low VOC Product
- Recyclable

Reduce Cleaning Time By 50%

Every minute your spray booth is shut down for cleaning is a minute you're not painting, and not earning. In busy paint shops, overspray quickly builds up on walls, floors, lights, and fixtures, turning simple wipe-downs into hours of scraping and heavy solvent use. That means skilled painters stuck cleaning instead of spraying, production delays during deep cleans, and rising chemical costs as stubborn overspray accumulates.

Protectapeel solves the problem by creating a peelable barrier across booth surfaces that captures overspray before it sticks. It can be oversprayed multiple times and, when fully coated, simply hand-peels away, taking all the overspray with it and revealing the original clean surface underneath.

This eliminates the need for harsh solvents and chemicals during cleaning, making booth maintenance faster, safer, and far less labour intensive. Just reapply with an airless spray gun and your booth is protected again. The result? Cleaning time reduced by up to 50%, brighter and more reflective surfaces, better spray visibility, and more time doing what matters: spraying, not scraping.

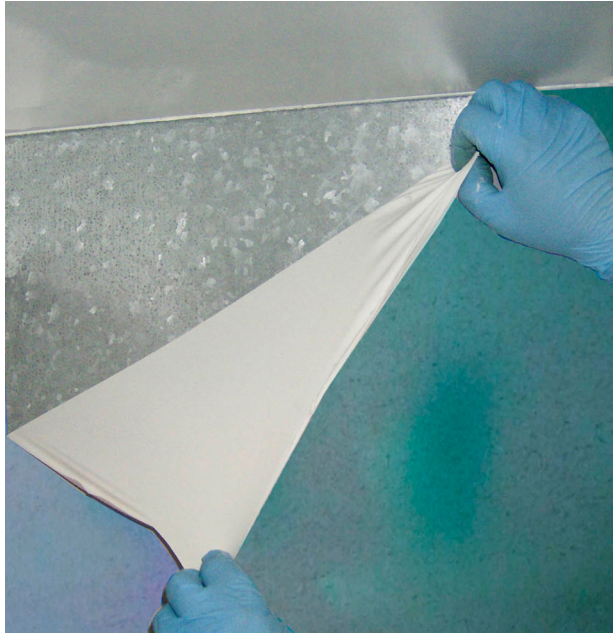

Protectapeel Boothstrip is a high-performance, peelable protective coating developed to keep spraybooth walls, ceilings, lighting, and other surfaces clean and protected from paint overspray, dust, and contamination. Simple to apply by spray, it forms a durable, removable film that can provide protection for up to 24 months under normal operating conditions.

Designed for the demanding environments of automotive refinishing and industrial paint facilities, Protectapeel can be overcoated repeatedly with paint overspray and withstand bake cycles of up to 80°C without losing adhesion or performance.

When the coating reaches the end of its service life, it peels away cleanly in large sections, removing accumulated layers of overspray and leaving the original surface clean, undamaged, and ready for reapplication.

By eliminating the need for aggressive solvent-based cleaning and labour-intensive scraping, Protectapeel helps reduce maintenance time, improve workplace safety, minimise operator exposure to cleaning chemicals, and maintain a cleaner, more efficient spraybooth environment.

Whether you're operating a busy automotive bodyshop or an industrial finishing facility, Protectapeel delivers reliable performance that saves time, protects your investment, and keeps your spraybooth looking its best.

For more information about Protectapeel Spraybooth Protective Coating or to discuss your specific application, contact our technical team today. We'd be happy to help you find the right solution for your spraybooth protection needs.
