

SPRAYLAT INTERNATIONAL

Machinery & Equipment Temporary Surface Protection

PRODUCT CAPABILITIES & PERFORMANCE

- Liquid applied by airless spray gun for consistent coverage
- Easy to remove by peeling, leaving the surface residue-free
- Ideal for curved and shaped surfaces
- Protects from dirt, paint overspray, mortar and more
- Weather resistant
- Up to 24 months of protection with no loss of adhesion, ensuring consistent performance over extended deployment or storage periods
- Eliminates the need for repainting or repairing
- Prevents site-related damage during construction, storage or transport
- Fully recyclable within the UK, supporting defence sustainability and waste-reduction objectives
- ISO 9001 accredited

Construction sites, manufacturing facilities and industrial environments can be tough on valuable machinery and equipment. Dust, paint overspray, mortar, dirt, moisture and accidental damage can quickly lead to costly repairs, downtime and unnecessary cleaning.

Protectapeel MachineGuard is a heavy-duty, peelable protective coating designed to shield machinery and equipment throughout construction, refurbishment, transport and storage. Applied as a liquid by airless spray equipment, it dries to form a tough, flexible protective film that simply peels away by hand when no longer required, leaving clean, undamaged surfaces beneath.

Protectapeel MachineGuard provides temporary protection exactly where it's needed, helping businesses maintain equipment in pristine condition whilst reducing maintenance costs and improving operational efficiency.

- Heavy-duty temporary protection for machinery and equipment
- Easily applied by airless spray equipment
- Conforms to complex shapes and irregular surfaces
- Suitable for indoor and outdoor applications
- Quick and easy hand peel removal
- Leaves surfaces clean with no damage
- Reduces cleaning, repainting and repair costs
- Ideal during construction, refurbishment, storage and transportation

Protects against:

Dust and dirt
 Paint overspray
 Mortar and cement splashes
 General site contamination
 Moisture and weathering

Whether machinery is operating on a busy construction site or awaiting installation in storage, Protectapeel MachineGuard provides a robust protective barrier against everyday site hazards.

The durable coating helps preserve both the appearance and performance of valuable assets by preventing contamination and surface damage before it occurs. Once the project is complete, the coating can simply be peeled away by hand—revealing clean, protected equipment ready for immediate use.

Typical Applications

Construction Sites

Protect plant machinery, generators, lifting equipment, control panels and installed equipment from dust, debris, concrete splashes and paint overspray throughout the build programme.

Manufacturing Facilities

Safeguard production machinery and finished equipment during factory modifications, maintenance shutdowns and production activities.

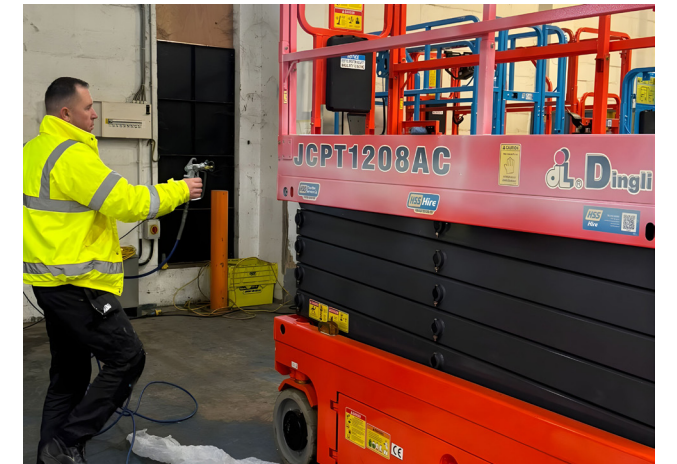

Equipment Transport & Storage

Prevent contamination, corrosion and weather-related damage while machinery is stored on-site or transported between facilities.

Refurbishment Projects

Protect existing machinery during repair work, refurbishment, repainting or surrounding construction activities without affecting the original finish.

Protectapeel MachineGuard is supplied as a liquid coating and is applied using airless spray equipment to create a consistent, even protective layer across large or complex surfaces.

After drying, it forms a tough yet flexible membrane that withstands the demands of industrial environments whilst remaining easy to remove by hand when protection is no longer required.

The result is equipment that stays cleaner, requires less maintenance and arrives ready for work. From construction sites and manufacturing facilities to transport and long-term storage, Protectapeel MachineGuard helps protect valuable machinery from avoidable damage, reducing maintenance costs, minimising downtime and ensuring equipment remains in excellent condition throughout every stage of its journey.

Over 30 years of
UK manufacture.
